**Read the following passage and answer Questions 96 – 100 :**

Research in any field is both a source and an outcome of the institutions that surround it. In communication research, the most obvious institutions are academic programs and the media industry's own research centers. These institutions are typically national and are firmly rooted in the respective political, economic and cultural conditions. Beyond them are international institutions, which come into play once similar establishments have emerged in several countries. These international institutions are relatively weak, but they both reflect and shape the national landscapes. What follows is a story of the most central international institution in media research, the International Association for Media and Communication Research (IAMCR), whose fifty-year history provides a panorama of how research in the field has developed and how it has been influenced by international contacts and cooperation.

Looking at histories of the emerging field of mass communication — in continental Europe from the late seventeenth century onward and in the United States from the early nineteenth century onward— leads one to notice how little and how late international institutions have played a role in shaping communication research. Although the roots of the field go back to the classics of sociology and political science, it is only in the twentieth century that we can find any systematic international networking of research, built through particular structures such as international meetings or associations among relevant scholars. Journalists and other “press people” had their first international congress in 1894, followed by their own international association(s) in the first half of the twentieth century. Global media policies began to take shape in the League of Nations in the 1920s— at a time when communication research was not only established but already being divided into various traditions. But communication research remained conspicuously remiss on its own international platforms and structures until the end of World War II.

The history of IAMCR begins in the first years of the United Nations Educational, Scientific and Cultural Organization (UNESCO), formed in the aftermath of World War II. In 1946, UNESCO proposed an “International Institute of the Press and Information, designed to promote the training of journalists and the study of press problems throughout the world.” This initiative was marked by the idealism that had inspired the founding of the United Nations (UN) itself.
